Topic: Home decoration management system.

ABSTRACT

Now day's the life style of people is different. People feel uncomfortable and time consuming for going crowd markets. So, E-Shopping saves lot of time. The Home Decor management system presents an online display of an order and an associated delivery window for items selected by the customers. An online platform for buying decoration items & accessories for your interior, which is most important segment in setting the complete ambience of your home. The system consists of decoration items such as plants, tables, mirrors, lamps etc. The user can view the specification of each product. They can view the product review & also write their own reviews. The registered user can buy product by adding it into the cart along with the quantity of the product & payment can be done through different methods like bank transaction, online transaction and cash on delivery. The product can be returned if the customer found any damage or not interested. 24*7 availability and 100% secure delivery process.

Existing System

In the existing system, the registered users can add items to cart and buy it. But the products are not categorized according to the category in the product gallery. And stock of the product was also didn't stored in the existing system. In the registration phase everyone can create an account, but after entering the details some authentication must be done on that side.

Proposed System

The proposed system focusing to solve the disadvantages of the existing system and try to provide a flexible environment for the customers to purchase products.
